

A few of the things we're working on to prepare our school sites:

- Purchased Plexiglass to install barriers in offices and areas that interact with the public.
- Inventoried all classrooms to ensure that they have hand sanitizer dispensers. Replacements were ordered for any classroom that didn't have one.
- Additional portable hand sanitizer stations are being built to be placed around the sites and at campus entrances.
- We have received a bulk shipment of hand sanitizer to keep the dispensers stocked.
- The maintenance department is constructing portable hand washing stations for Carmel High and Carmel Middle Schools. The elementary sites have a sink in every classroom so we won't be placing portable stations at those sites.
- We've ordered no-touch soap dispensers and intend to install them before the start of school.
- Furnace filters are on a regular schedule for replacement and all filters in the District will be changed over the summer.
- Training on sanitizing procedures was conducted with the custodial staff and more training is planned at the end of the summer.
- We've ordered PPE, such as face masks, face shields, and gloves.
- This is an evolving situation and we're adapting and adjusting as conditions change and more information becomes available.
